DETAILED ACTION

Drawings

1. Figure 7 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.
2. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, both of the first and second loops arranged in main part or display part must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for

Art Unit: 2821

consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-5, 7, and 9-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sadler et al (US Patent 6,011,519) in view of Kim et al (US Patent Application Publication 2002/019906).

Sadler et al disclose, in figure 2, an antenna device used in mobile terminals comprising a planar loop antenna 34 disposed in a main body part and a loop 36 disposed in a display part. The patent to Sadler et al differs from the claimed invention because it does not disclose the loop antenna is a three-dimensional shape and extends along lateral surfaces of an enclosure. Kim et al discloses, in figure 5, a coil loop antenna having three-dimensional shape and extends along lateral surfaces of an enclosure. The patent to Kim et al also teaches that the chip antenna is used for various wireless communications. Since one of ordinary skill in the art would have recognized

Art Unit: 2821

the benefits of increasing the gain of the antenna it would have been obvious to provide the mobile terminals of Sadler et al with the three-dimensional loop coil antenna as taught by Kim et al. The semiconductor integrated circuit having data communication coupled to the antenna is well known in the art.

5. The patents to Akiho et al, Matsumoto, Tsuru et al, Hong et al, and Park et al are cited as of interest showing the antenna similar to that disclosed.
